

Applying Floor Stickers Easy Installation Guide

Tools:

Masking tape, ruler, hard squeegee and scissors.

Tips:

- Apply your floor decal on any smooth indoor floor surface
- Make sure there is no dirt or debris on the surface of your floor, otherwise your floor graphics will not stick.
- Once the decal has been applied, to the surface of the floor you might see air bubbles (this is normal). Simply poke them with a needle or pin and then press the air towards the hole you poked in the decal. This will allow the air bubble too to deflate through the hole and then disappear.

Step 1: Thoroughly clean surface before installing the floor decal.

Step 2: Measure and center your decal in desired area.

Step 3: After measuring, tape the floor decal in place (making sure it looks centered).

Step 4: Remove part of the decal from backing paper.

Step 5: Cut strip of the paper with scissors.

Step 6: Squeegee down part of the decal in a vertical motion.

Step 7: Remove the rest of backing paper.

Step 8: Continue to squeegee the rest of the floor sticker.
